- **Note:** The WST 4.1 Manual should be consulted for scoring details (www.wheelchairskillsprogram.ca).

Scale for Scoring Skill Capacity/Performance

Pass: (on the Data Collection Form, record “P” or ✓)

- Task independently and safely accomplished. Unless otherwise specified, the skill may be performed in any manner. The focus is on the task requirements, not the method used. Aids may be used (section 2.23).
- A pass may be awarded if the subject passed a more difficult version of the same skill (e.g. if a subject successfully ascends a 15cm curb, a pass may be awarded on the 5cm level change without the subject needing to actually perform the latter).

Fail: (on the Data Collection Form, record “F” or ✗)

- Task incomplete.
- Unsafe performance (as defined in section 2.25).
- Likely to be unsafe in the opinion of the clinician or tester (e.g. on the basis of the subject’s description of how a task will be attempted).
- Unwilling to try.
- Has failed an easier version of the same skill (e.g. if the subject cannot roll forward 10m [#5.8], he/she need not be asked to roll 100m [#5.21]).
- If a caregiver is the subject of testing, he/she may not ask the wheelchair occupant for advice or physical assistance in the performance of the skill unless specifically permitted in the caregiver section of the individual skill descriptions (section 5).
- Wheelchair part malfunction.

Scale for Scoring Skill Safety

Safe: (on the Data Collection Form, record “S” or ✓)

- None of the unsafe criteria were met.
- Although a failing capacity score will be awarded in such circumstances, a safe score can be awarded to a person who states that he/she cannot do and/or will not attempt a skill.

Unsafe: (on the Data Collection Form, record “US” or ✗)

- Subject requires appropriate significant spotter intervention to prevent acute injury to the subject or others (section 2.26). Performing a skill quickly is not, in and of itself, unsafe. A significant intervention is one that affects performance of the skill.
- A significant acute injury occurred. This includes sprains, strains, fractures or head injury, but does not include minor blisters, abrasions or superficial lacerations. Poor technique that may or may not lead to overuse injury at a later time should be noted in the comments section, but does not warrant awarding an unsafe score.
- During screening questions (section 3), the subject describes a method of performing a skill that the tester considers dangerous.
- If a caregiver creates more than minimal discomfort or potential harm (e.g. using excessive force with the knee against a flexible backrest of the wheelchair to help push the wheelchair through gravel).
- Specific risks and whether they warrant an unsafe score or merely a recorded comment can be found later in the section on individual skills (section 5).

Note: If an easier version of the skill has been failed, the skill under consideration is not objectively tested, so the tester needs to determine whether the attempt would have been safe or unsafe on the basis of interview only.

For both Capacity/Performance and Safety

No Part: (on the Data Collection Form, record “NP”)

- As for Capacity scoring (Table 1).

Testing Error: (on the Data Collection Form, record “TE”)

- As for Capacity scoring (Table 1).

Total Capacity/Performance Score = # passed skills _____ / (32 - # NP - #TE) X 100% = _____%

Total Safety Score = # safe skills _____ / (32 - # NP - #TE) X 100% = _____%
